

ROYAL KINGDOM MANAGEMENT SYSTEM

www.apitechnologiesgh.com

INTRODUCTION

Royal kingdom management system is a system created to facilitate the company's work processes and help keep proper record and documentations of management data.

It's user-friendly interface combine with technological implementations is channeled to make the work processes on Royal Kingdom Estate more efficient and effective.

System Modules

These are the list of the system's menu, its implementation and their functionalities.

DASHBOARD

The dashboard is the first view you see when you are logged in, and it comprises of various tools and indications, such as report summary, quick menu, graphical report. Etc. The dashboard tells a lot about the system even without navigating through.

PROPERTIES

The property menu handles the property section of the company. It has been created in a way, to add properties, view property details, and also view the list of properties the company has. And it is divide into to two part, Land and Apartment.

CLIENTS

This module is used for client registration by taking their personal details, next of kin's details and any additional document . These details can be viewed, edited and deleted when its not needed.

STAFFS

This staff module is used by the top managements to register company's staffs or employees, view and edit their details.

EXPENDITURE

The expenditure module keep records of all expenditure made by the company and it takes all the details of the expense. All funds going out of the company are recorded here with it's purpose clearly stated.

LAND

This module shows the list of lands sold out, the clients who purchased and the current status of the transaction. Its also handles all land related transactions, like payments made, terms of payment, repayment / payment date, details description of the property etc.

APARTMENT

The apartment module works more like the land module but its targeted at renting out of apartment unit. With this module, management can keep track of apartment and unit status, get full oversight of occupant details and the status of the agreement.

QUOTATION

This module's sole aim is to helps keep quotations data and give easy retrieval. This will help in feature budgeting and follow up on interested client.

INSPECTION

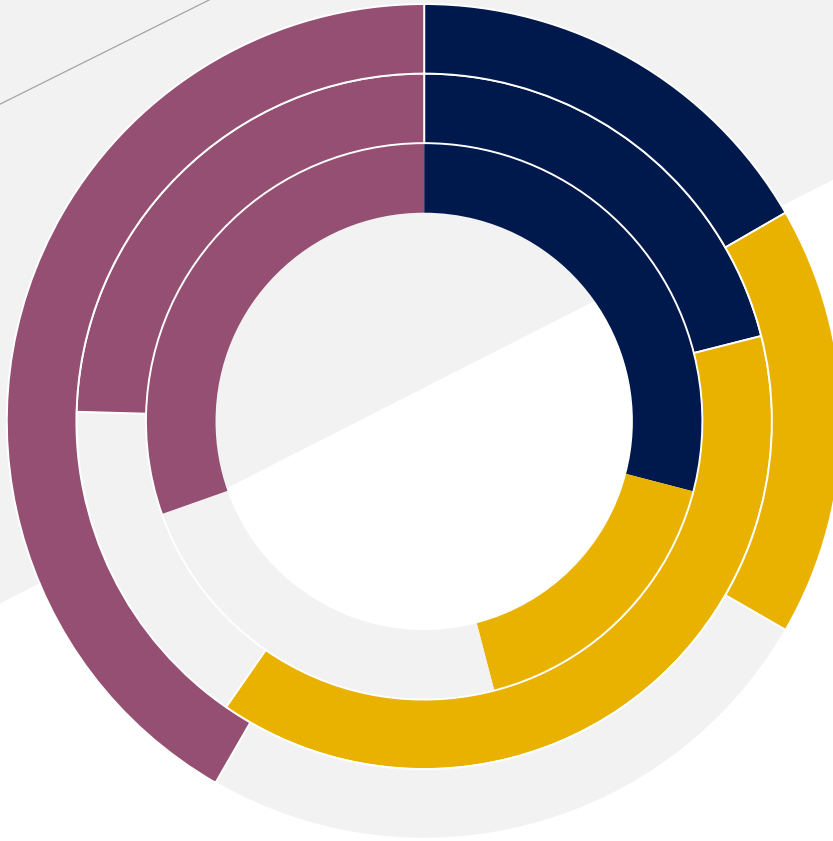

The inspection module keeps record of all clients that have visited our site. It helps to plan site viewing exercise and help in making executive decisions on our site visit.

REPORT

This module gives access to search reports of all the other modules with their details in a list report form which can either be printed or generated in the form of an excel document to help in decision making.

SETTINGS/USERS

The user setting module is used to add system users and show their user levels i.e. what a user can do.

Thank You.
